

# The Journal of Open Source Software

A developer-friendly journal for research software packages.

## Editorial Board

Arfon Smith, Editor-in-chief

Lorena A. Barba  
George Githinji  
Melissa Gymrek  
Lindsey Heagy  
Kathryn Huff  
Daniel S. Katz  
Christopher R. Madan  
Abigail Cabunoc Mayes  
Kevin M. Moerman  
Kyle Niemeyer  
Pjotr Prins  
Karthik Ram  
Ariel Rokem  
Tracy Teal  
Roman Valls Guimera  
Jake Vanderplas

## Content Licensing

Submitting authors retain copyright of JOSS papers, releasing them under a Creative Commons Attribution CC-BY 4.0 International License.

Any code snippets included in JOSS papers are subject to the MIT license, while the submitted software package can retain its preferred license.

## Scope and rationale

The Journal of Open Source Software (JOSS) is a free and open-access journal that publishes articles about research software. It is a response to a concrete need: *citation credit for researchers who produce software*. Articles receive a Crossref DOI and can be indexed by third-party services. JOSS publishes articles that encapsulate scholarship contained in the software itself, and its rigorous peer review targets the software components: functionality, tests, documentation, continuous integration, and the license. As such, JOSS also has the goal of improving the quality of the research software submitted.

## Open peer review

Editors, reviewers, and authors work collaboratively and openly. Reviews and related discussions occur on the public issue tracker of the JOSS GitHub repository. the JOSS community adheres to a code of conduct adapted from the Contributor Covenant code of conduct

## First year

JOSS published 111 articles, with more than 40 under review, at the end of the first year. The journal became an affiliate of the Open Source Initiative (OSI) and a fiscally sponsored project of the NumFOCUS nonprofit organization.

See our article preprint *about* JOSS and its first year at: <https://arxiv.org/abs/1707.02264>
